

smartspeed lite™

test like the pros

Fusion Sport's SMARTSPEED reactive training and testing system is the world's first choice for training, testing and coaching athletes of all ages. Used by Professional Teams, Universities, Schools and leading Institutes, SMARTSPEED has changed the way technology is used in sport.

For years Fusion has been asked to provide a lower cost system simply for collecting fitness test data, to suit lower budgets and provide a solution for those not able to utilise the everyday training applications of the full system. SMARTSPEED LITE now offers all of the benefits of wireless multilane timing to a Pocket PC computer, with all of the quality and accuracy of SMARTSPEED, and the features that make this the best timing gate system in the world.

all the quality you have come to expect

SMARTSPEED LITE utilises the same core technology as the full SMARTSPEED system -

- ▶ Wireless multilane timing straight into windows using Pocket PC PDA and Grabba sleeve unit
- ▶ Error Correction Processing (ECP) to eliminate hand beam breaks and false starts
- ▶ Fully compatible with Fusion's SMARTSCAN RFID player identification system
- ▶ Ability to run a wide range of fitness tests - straight timing, agility, interval protocols and free timing mode

your entry to the future

The SMARTSPEED LITE system is fully compatible with the full reactive SMARTSPEED product range. As your interest grows in using the full benefits of reactive training drills, pacing, simply upgrade to the software package of your choice, and add full SMARTSPEED units to the system.

SMARTSPEED LITE is also compatible with Fusion's SMARTCAPTURE video integration package. With this powerful combination, you can now collect a video clip of each test, automatically. Ideal for coaching, teaching, research and talent identification, you can now have both qualitative and quantitative data at your fingertips.

mix and match for a tailored solution

Now you can choose the ultimate combination of LITE and full SMARTSPEED units to suit your needs. For example, choose a 4 gate SMARTSPEED system to run all of our world-renowned training drills such as reactive cuts, pacing, jump training with feedback, and the patented reactive grid. Then, add another 4 LITE gates to give you a larger system for multilane fitness testing capabilities. You can also add a SMARTSPLIT LITE PDA and Grabba sleeve upgrade to your package, allowing you to run two systems at the same time in the same place - ideal for those large testing days, or for running multiple activities in a training session.

technical specifications

- ▶ Completely wireless - range up to 400m line of site
- ▶ Up to 8 lanes of concurrent timing on one PDA (16 gates maximum)
- ▶ Independantly proven superior accuracy - timing to 0.001s
- ▶ Lane width (photcell range) up to 5m
- ▶ Water resistant and robust for everyday use in all conditions
- ▶ Rechargeable long life batteries for those long testing days
- ▶ 10cm (3') or 1m (3'3') hand start pad/strips also available

Fully compatible with the entire Fusion Sport product range -

Smartscan

RFID player identification

Smartjump

Jump testing
